PROJECT DESCRIPTION

SIPPY is a playful robotic cup holder designed for desk workers. When your drink has been ignored for too long, it rolls toward you like your coffee is complaining. Using gesture control, movement, and weight sensing, SIPPY turns hydration into a small desk interaction — a humorous reminder to pause, sip, and take a break.

How to summon sippy

Thumbs up

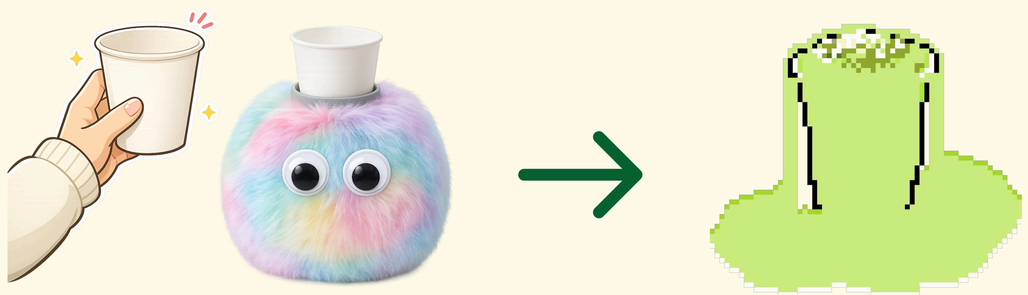

Sippy will gradually move away, giving you some quiet space so you can refocus on your work.

Open palm

Sippy will slowly approach with your water, reminding you to take a break, have a drink, and escape the hustle and bustle for a moment.

HOW THIS WORK

1. Put cup on the Sippy
Sippy starts timing how long it takes for the user not to drink water

2. Too long not to drink water
The water in the cup will slowly overflow and a cute table pet will appear to alert you

3. Summon sippy & Take a break
Users can use gestures to control sippy to come to his side

Tip If you haven't had a sip for too long, Sippy will step in with a mandatory reminder.
